

Sustainability Tips for N2026

Small actions for a more sustainable conference

At 10th International Nitrogen Conference (N2026), we aim not only to discuss sustainable nitrogen management but also to put sustainability into practice. Here are some simple ways to help reduce waste and resource use during your visit to Kyoto.

WHAT TO BRING

- | | |
|---|--|
| ☐ Reusable water bottle or tumbler | ☐ Reusable bag |
| ☐ Notebook, pen or digital device | ☐ Personal cutlery or chopsticks, if useful |
| ☐ Handkerchief or small towel | ☐ Personal toiletries and clothing layers |

Bring what you already own; there is no need to buy new items for this event. A limited number of *furoshiki*, traditional Japanese wrapping cloths, will be available at the venue.

AT THE CONFERENCE VENUE

- Refill your bottle from the drinking-water dispensers. Please help us reduce single-use plastic bottles and cups.
- Use Confit and the N2026 website for program information and abstracts whenever possible. A compact printed program will also be provided at registration.
- Take only what you need and help prevent food waste. Please follow the waste separation guidance at the venue.

AT YOUR ACCOMMODATION

- Switch off lights, heating and air conditioning when you leave your room.
- Reuse towels and bed linen, or skip daily room cleaning, when practical.
- Use disposable toiletries only when needed and follow local waste separation rules.

DURING YOUR STAY IN KYOTO

- Walk or use public transportation, such as trains, subways, and buses, whenever practical.
- Enjoy local and seasonal food, and order only as much as you can finish.
- Carry a reusable bag and dispose of waste responsibly.

Thank you for making sustainability part of N2026.
